- Realtime
- Ruby / Any rack based framework
- Native Code (C++, LLVM toolchain)
- Backbone.js
- Amazon Web Services (AWS)
- Java
- Groovy
- HTML
- XML
- Concurrency
- Streaming
- Nginx scalability with Lua for soft Realtime transaction handling

EXPERIENCE

WearMyTags.Inc 04 / 2014 - 09 / 2014
Lead Systems Developer (Rails + NodeJS)

Senior applications developer for WearMyTags Inc, web presence. From first inception UI mockups to past the initial Investor seed round and into further successful funding rounds, I was responsible for all devops, testing, and implementation of the system in a scalable manner, allowing the company to reach their target growth and obtain further funding as a fast growing startup.

Stream - Realtime News & Data 06 / 2013 - 08 / 2014
NodeJS developer

Stream.com.au makes it easy for Journalists to instantly obtain the latest trending topics, comments and news across a wide range of popular news publications. My responsibilities included building and maintaining various NodeJS realtime services. Such as a scalable realtime platform for detecting story and comment trends using a unique algorithm in combination with map reduce over large data sets. As well as developing a faster and more scalable approach to real time news collection, which is still in use at the company to this day.

DineCart 03 / 2012 - 05 / 2014
Lead Software Architect

Lead software architect for DineCart's highly customizable ecommerce solution for building a scalable "Daily Deals" platform. Technology stack I was responsible for utilized load balanced Nginx connected to PHP (recently upgraded to HHVM) on top of the Symfony framework with inter-service communication achieved using Redis as the core message broker.

Kerry Software Ltd.

2012 - 2013

Erlang Developer (Elixir + Legacy OTP)

Core developer for company's in-house solution for high-traffic Grocery supply logistics. Product provides centralized control over the creation, scheduling, deployment, and tracking of digital orders and coupons for display with a wide range of clients.

Jive Always

2010 - 06 / 2012

Software Engineer

Developing and managing web services built within the AWS infrastructure. Primarily working on the JVM with various languages such as Groovy and Java. While also responsible for front-end development tasks (full stack javascript powered sites). My responsibilities included client project development and service maintenance support for long term clients.
