Michał Zyndul

Senior Web Software Developer

I am an interactive developer whom started the journey of developmentover 10 years ago. I have developed complete application solutions from both the front-end (design) and backend (data architecture) development sides.

Through this process I have become quite familiar with several intuitive frameworks and design patterns understanding when, how and why to implement what strategy in each given solution I provide.

Skills

|			
Python	10/10	Django	10/10
PHP	8/10	Javascript	6/10
jQuery	6/10	HTML/CSS/LESS	5/10
AngularJS	4/10	English	8/10

Projects in Milo

Maidgency

We supported developement of Maidgency - portal where you can book cleaning of your apartment, house or studio and if you are cleaner, you can find customers with ease. Additional features are simple service management and booking calendar.

The Altitude Centre

Complete gym system prepared for The Altitude Centre - altitude training specialist. Our first task was to prepare new applications that support training on the gym by recording data from sensors (heart rate monitors and pulse oximeters) and preparing reports for customers. This part of the project consist of two applications: - Windows desktop application that allows configuring session and displaying data from sensors in real time on shared screen. - Raspberry Pi application that is used for recording the data from the sensors in real-time during the training. We needed to support sensors using variety number of technologies: USB/VCP, Bluetooth and ANT+. Our second task was to redesign and prepare updates for existing application used in The Altitude Centre POD.

Realestate

Django/QT application. Created for our klient from Kair. This application is slitted into 2 parts. Fronted was built in QT technology and backend in Django.Both are "talking" to each other through REST API. Main purpose is to support renting/selling property in that region. The frontend part is independent and can work offline. The backend is mainly responsible to synchronize data, and manage license.

MiloTab

MiloTab is an innovative solution built for small medium and big restaurants. Milotab.com website has all information about the product and was developed using PHP and Drupal CMS.

compassGame

Integration of Photon Cloud (multiplayer engine) with Qt project. Login, create games rooms, inviting people, communication between team mates and transfer events. The project also included communication with data server.

Insiders

MyInsiders is an application where you can share with your impressions of the newly discovered places. And also learn about the new interesting locations found by your friends. Our team helps improve the appearance, as well as the application performance on the server side.
