Set Up Website on Amazon AWS ()
Feb 2016

⭐⭐⭐⭐⭐ **5.00**

I can't say enough great things about Aristotle! I'm very glad I found him. I had been looking for a top level Systems Administrator and Amazon AWS Architect for a long time and interviewed several other freelancers. Aristotle helped me set up my entire server and CDN on Amazon, improving page load speeds 3x. The best thing about Aristotle is his patience. He took me through every single detail and answered every single one of my questions. He helped me understand exactly what to do if I ever need to do it myself. I will be DEFINITELY hiring Aristotle in the future. Highly recommended!

Java Swing GUI Development ()
Jun 2012 - Apr 2014

⭐⭐⭐⭐⭐ **5.00**

I hesitate to provide feedback for this programmer because I want to keep him completely to myself. He is certainly one of the most talented and professional software engineers I have met. He does not just blindly follow instructions, but instead he quickly analyzes and grasps the business requirements, usually proposing an improvement to the original specification. He is a natural team leader and mentor for other programmers. He is also great with our end users, answering their questions and helping them solve tricky problems. In our project he quickly

picked up a totally new subject domain, quantitative finance, and now has a deep expertise. He works well independently, and does not require any micro-management or hand-holding. We have worked almost exclusively on the NetBeans application framework, which he knows inside-out. I highly recommend him as a java programmer, systems engineer, team leader, and technologist.
