I'm 23 years old self-taught full-stack **developer** and **designer**.
Fan of cryptocurrencies, smart homes, games, VR, AI and probably everything else you can imagine.

Since 2005 i am on my my trip to world of technology and design.
Every day starts with a coffee and two spoons of code.

After those years i'm really happy that i started programming when i was ten, because i had a lot of opportunities to enjoy "the old way" of programming, which shown me how it works "under the hood" and also had enough time for design & art.
