Objectives

A challenging career in a prestigious organization that effectively utilizes my analytical, interpersonal, leadership and organizational skills to conceive and achieve solutions. I want to work for a major player so I can be at the forefront of breaking trends and new technology as a key player in the organization's development.

Education

Bachelor in Computer Science (December 2016)

Iqra University Islamabad

- Learn Web (HTML, CSS, JavaScript,php,mysql),Adobe Muse, Game (Unity, 3D Maya, Photoshop), Application (Android, Windows) and other (MATLAB, Azure, Verilog, C++, C# and Java) Development. Also Image Processing, Software Architecture, Computer Architecture and Algorithm Creation like techniques.

Intermediate in Computer Sciences (2010-2012)

Rawalpindi College of Commerce

- History and Basic knowledge about Programing in(C,C++)

Learning Experience

► **Website Development**

From website design to website publishing, my semester project was to make a website using teacher's requirement on an asset store. To maintain record of assets I used MySQL database linking with PHP also make two inventory project one for Office inventory and other one For Sale and Purchased

▶ **Windows Application Development**

Using C#, XAML and Facebook connection I created an application for windows 10 which takes user Facebook ID and password than shows its related information about Solar system according to user age (under 18)

▶ **Unity Game Engine**

I created 3D games as semester learning projects, but to increase my learning experience. Also created a 2D game by using physics and animation. Which provide user two tap keys on screen and user have to balance a cycle seat in center which is continuously under effect of gravity.

▶ **Image Processing**

Change colors of a person and make it look like a Shrek cartoon character, make a person invisible from the video which looks as if a ghost is walking with only a shadow, make water color red in any video of sea or river and lastly implementing filters in picture/video frames (brightness, sharpness, edge detection etc.).

▶ **Adobe Photoshop**

▶ **Adobe Muse**

Skills

- ▶ WordPress
- ▶ HTML5/CSS3
- ▶ Bootstrap
- ▶ PHP
- ▶ MySQL
- ▶ Unity (2D,3D)
- ▶ Adobe Photoshop
- ▶ Adobe Muse
- ▶ Web
- ▶ MS office

Work Experience

Job Title: IT Consultant

(January 2017 – August 2017)

Started as intern (January 2017) and continued here as employee. Currently developing HR Portal and different Web Application and android application for Research and Development. Asset Inventory software For office Staff
Sale and Purchased Inventory Project
Online reservation System

WEB DEVELOPER

(September 2017 – Till that day)

Working as a web developer in Outclass Developer and work on WordPress, HTML5 & CSS3 and have experience on Adobe photos hope

Project

❖ *Assets Inventory System*

This is a web-based software, which is used inside office to save inventory records.

- Sales and Purchased Inventory Software for RADS
This is also a web-based project, which is used for sale and purchased from one office to other then customer. Link: www.resdev.co
- I have Complete HR portal for office
This software is for office use called HR portal for HR team to save record of employees.
- Random Number Application
Android Based Application this application for project which help to choose household
- Electronic Health Care (EHC)
Electronic Health care is a web project it is an online Lab, which help user to book online appointment in hospital.
- World Hiking App
My final year Project is app called world hiking. In this app user select hiking path make community and admin will check all member how far they are from final destination. User check his hiking record it's tell user how much he move, how much calories burn and also its web version will help to match his performance with other hiker.
- Connect Four Game Using C++
As a semester project (second semester), I built a game using only C++ programming. Connect for is a two player game in which each player gets one move to place a piece on a board of seven columns and six rows. Whoever makes a combination of four pieces in a row wins the game; the combination can be in vertical, horizontal or diagonal direction. In my project-using mouse as input source, I took users inputs and by implementing combination check on every turn made it intelligent to recognize when to terminate game. It also kept the game win record till players decide to reset the score board.
- Database management
I designed a hospital management system using Oracle database query. It helped me to understand database connection and utilization. I also attended PTCL database management classes organized by our university, which explained database linking on a wider range.
