VADIM **ZOTOV**

SUMMARY

I have over 10 years of experience in IT development. I was in charge of managing multiple development teams within budget and project schedule using big technologies stack of enterprise and/or mobile applications and Big data. During this time my teams were successfully implementing Scrum as the major approach for different customers. Ten projects have been successfully completed for the last 4 years. Taking everything into consideration, I have strong skills for creation of effective delivery process, including well-organized quality and scope management system. My goal is to facilitate every team member to share knowledge within the team, orginize predictable development and delivery process, help team members to bring their ideas to fruition, the latter is mutually beneficial to reaching Customers satisfaction.

Prior to experience mentioned above, I was working on position of J2EE & J2SE & Android developer for 4 years. Thus, I have strong technical background. Developing and supporting enterprise software, I was solving complicated business tasks to deliver working solutions. Besides, I have experience in designing of all application layers: from backend to rich user interface. I am skilled in organizing development process using XP practices and review process to help team deliver well documented, maintainable and flexible code**.**
