

VITALIY ZUBRITSKY

SUMMARY

I am Full Stack Web Developer (ASP.NET + Angular). On past projects I was in charge of creation of all system layers - from database to business logic and user interface.

I was leading development team created from the scratch and responsible for delivery process. Especially - the scope decomposition, backlog creation, leading the estimation process, creating the architecture of the product, performing code reviews, make demos for stakeholders and releasing the app.

Agile (Scrum, Kanban) process was fully implemented on my projects so I am skilled in team organization process.
