VYSAKH S

(PHP Developer)

I am a PHP developer with 3 years of experience in this field. I am good in writing server-side web application logic and with the back-end components; I used to connect the applications with the other third-party web services and also supports the front-end developers by integrating their work with the application. Currently, I am working with the most experienced professionals of Corentive Digital solutions, Kozhikode. We have a very innovative and enthusiastic team in there. My duty is to create a user interface or work behind the scenes, and the PHP language is frequently used in combination with SQL for databases. It also used for basic website functions like accepting usernames and passwords and managing guestbooks. I am doing my best in my duties including the website administration, software testing, and user training with helping the software developers to create a prototype in PHP. As an advantage PHP is the speed with which development can take place; a disadvantage is that it is prone to security vulnerabilities which can be overcome by proper coding.

Work experience

1. Ziventure Technologies LLP, Kozhikode
2. Corentive Digital Solutions, Kozhikode.
