PROJECT: Share Society

Platform:	React-Native
Role :	Programmer
Tools:	React-Native,Android Studio,XCode,Visual Studio Code,node-v10

About Project: This app is for common users to share their items/services, which are no more in use for them or currently are not being used or they would like to offer out of interest, with other users on a timely basis (temporarily).

Similarly, users will be able to borrow the items/services available on the platform or can float a request for the desired item which they would like to borrow.

Share Society is a simple to use, mobile and desktop application allowing people to share a wide variety of goods and services using a reward system SHARES which lets them save money, benefit their community and do so in a sustainable manner.

PROJECT: Locate Points - How to Locate AcuPoints

Platform:	React-Native
Role :	Programmer
Tools:	React-Native,Android Studio,XCode,Visual Studio Code,node-v10
<p>About Project: This mobile app describes the location of acupuncture points, HOW TO LOCATE ACUPUNCTURE POINTS – THE DEFINITIVE APP shows you how to find them on a live model using a unique, three-camera video perspective, recreating the experience of having one-to-one expert tuition right at your fingertips.</p> <p>https://play.google.com/store/apps/details?id=com.locatepoints https://itunes.apple.com/us/app/how-to-locate-acupoints/id1319494898?mt=8</p>	

PROJECT: Proteus - Q Assure Build Ltd

Platform:	React-Native
Role :	Programmer
Tools:	React-Native,Android Studio,XCode,Visual Studio Code,node-v10
<p>About Project: Proteus has been developed for inspection purposes, run from smartphones and tablets. It provides Site Inspectors & Surveyors with a menu-driven inspection tool that allows for electronic data capture throughout the construction process at key stages of the build, facilitating and documenting consistent quality control and a high standard of inspections, ensuring</p>	

	centralized defect and inspection standards. The system outputs high-quality reports documenting the inspections carried out at one particular time, on a plot by plot basis or site-wide inclusion, immediately communicable to clients, site managers and other interested parties, providing a follow up close-out function, which provides a high-level audit trail of remediation and improvement of systems and processes.

PROJECT: CoMPACT App

Platform:	React-Native
Role :	Programmer
Tools:	React-Native,Android Studio,XCode,Visual Studio Code,node-v10
	About Project: The app is aimed to solve the language barrier between patient and clinician. Once the clinician has access he will log in and the user will be asked to select a language (which will be remembered later on for subsequent app use) The user will be shown one or two screens to complete a survey. There will be a fixed set of questions on each screen. Each question will be in two languages (English and the user selected language). Users will be able to touch a sound icon against each question which will play an audio clip of that question in user-selected language.

PROJECT: GLOBALDRUM

Platform:	Android
Role :	Programmer
Tools:	Android Studio 3.2.1, Android

About Project: GLOBALDRUM is a mobile social platform enabling enterprises to monetize audiences. Representing a new genre of white-label enterprise audience interaction, GLOBALDRUM directs value from social networks back to enterprises. Managing business models on demand, enterprises become social networks, communities, or community apps (or all 3!) in their own right, synchronized with existing social media. Exposing dynamic event-level data, enterprises may understand what each audience member values, using targeted, geo-located, behavioral enriched, with external socio-economic data, typically for use in acquisition, retention, and predicative retargeting.

PROJECT: MyCLOCKEDIN, ClockedIn Geo-fence, MTCBiometrics

Platform:	Android
Role :	Programmer
Tools:	Android Studio 3.2.1, Android
<p>About Project: These android apps are a simple yet professional way to monitor your employee's working hours. Our geo-fence,biometrics feature is an invisible boundary created in the ClockedIn software, which will monitor the movement of an employee in the desired area, removing the need to manually clock in and out. The geo-fence is flexible to size and can be customized suiting all business needs. For more information about Clockedin's Time and Attendance system please check www.clockedin.co.uk https://play.google.com/store/apps/details?id=com.mobileclock.clockedin</p>	

PROJECT: TopChat

Platform:	Android 2.2 and Above, Android 4.0 and above
Role :	Programmer
Tools:	eclipse-java-juno, Openfire 3.9.1

About Project: TopChat is a text chat application (similar to Whatsapp) for iPhone and Android devices. The basic purpose of the application is to allow users to communicate with other registered users via text messaging. Once users and their friends/relatives download the application, they can use the application as much as they want. The application uses the user's Internet connection (3G/EDGE or Wi-Fi when available). Users can send video, images and voice notes to their friends and contacts with additional features like FAX upload and music share.

PROJECT: Cell Control

Platform:	Android 2.0, Android 1.6
Role :	Programmer
Tools:	eclipse-java-europa, android-sdk-2.0, android-sdk-1.6
About Project: Development of this mobile application is proposed where it controls phone services and the prevent user to navigate to another provided app and blocks calls and SMS/Email and search nearby devices by Bluetooth.	

PROJECT: EasyDialPro

Platform:	Android 2.0, Android 1.6
Role :	Programmer
Tools:	eclipse-java-europa, android-sdk-2.0, android-sdk-1.6
About Project: Easy Dial Pro is an advanced dialer and call logger for Google Android based phones. The application tries to overcome the usability problems in the default applications provided by Android for this purpose. Application offers all	

of the standard features in default dialer and call log with much more in a user friendly and efficient way. Easy Dial Pro will let you dial a contact or individual number with the ease of T9 search on your regular number based keypad. Application can get integrated with the default call button and pressing the button then after will directly open the Easy Dial Pro window. Application also allows the users to create text messages or emails directly from the dialer screen. Thus eliminating the extra steps to open the respective application, choose the contact and so on.

PROJECT: MoboTour

Platform:	Android 2.0 and Above, Android 4.0 and above
Role :	Programmer
Tools:	eclipse-java-indigo-SR1-win32

About Project : MoboTour's mission is to be the most innovative, simplest and most reliable verification and touring system on the market. MoboTour is THE Next Generation Verification and Security Touring System. MoboTour uses a mobile app, QR codes/RFID and a cloud-based portal to provide accountability to security and patrol services. MoboTour provides value to a variety of organizations. MoboTour primarily provides Verification and Accountability services to organizations that require security or patrol services. Specifically where businesses are hired to patrol and monitor. MoboTour provides the hiring business the ability to verify the patrol unit is actually performing the patrol (what they are being paid to do). This is done via a mobile app, QR codes, and a cloud-based portal to view the patrol data.

PROJECT: Collections

Platform:	J2ME
Role :	Programmer
Tools:	sun_java_me_sdk-3_0-win, Bluetooth Printer MOB 52

About Project : Collection on Mobile offers several unique features and has been developed to integrate with any base system. Presently, Banks follow a traditional way of collecting outstanding payments, wherein the collector is allocated a fixed number of cases and he normally takes the printout on a piece of paper and proceeds with the field based collections. This traditional method has several areas on which a significant upside can be achieved.

§ ‘Real time’ information is not available to the collector; consequently the collector cannot verify the claims made by the customer. These can be potentially detrimental when the customer claims are false.

§ Less information leaves the collector with very little room for negotiation.

§ The money collected by collector is not tracked immediately by the bank. Non-timely submission of collected funds may disturb the workflow and bank projections, in a significant manner.

§ While on a field visit, the collector cannot give any acknowledgements of payments to the customer; this may create doubts regarding credibility.

Client :	<u>Nucleus Software Exports Ltd.</u>

PROJECT: ManDown App

Platform:	Android 2.0 and Above, Android 4.0 and above
Role :	Programmer
Tools:	eclipse-java-indigo-SR1-win32
About Project : Developed by NYC Firefighters, this app provides a reliable, inexpensive way for a lost or unconscious Firefighter to alert others. Multiple contacts can be entered to receive Voice, Text and Email alerts along with GPS positioning. The Alert is activated by one minute of non-movement with 30 seconds of audible pre-alarms to cancel the sequence. Although this app was developed for Firefighters, it is useful for any First Responder, Military personnel, lone workers, seniors or anyone else desiring an automatically monitoring phone. There is also an SOS button for immediate help. A portion of all sales will be donated to First Responder and Military support organizations.
