Cherkasy National University

**Faculty of Computer Science,
Intelligent and Control Systems** (2016-2020)

Cherkassy, UA

Bachelor degree

EXPERIENCE

LoadBoard — FRONT-END DEVELOPER

DEC 2024 — PRESENT

This platform is designed to streamline the transportation process for transportation companies, facilitating the movement of goods such as household items across various locations within the US. The platform has functionality for both carriers and brokers, they both use a single system in which they decide what functionality to use and not to use, based on the specific services the company uses / offers or would like to use / offer.

B24 — FRONT-END DEVELOPER

AUG 2024 — DEC 2024

It's a web platform specifically designed for managing corporate gifting programs and offering discounts to large groups of employees, enabling organizations to implement large-scale, targeted incentive initiatives. The platform allows users to create merchants and organize activities-themed campaigns that facilitate the distribution of gifts (products) or discounts on services for clients of a selected merchant. Each activity generates a temporary showcase website for end-users (employees receiving gifts or discounts), creating a seamless and personalized experience.

Additionally, the platform includes a CRM module for managing merchants. It allows new merchants to be added, invoices, orders, payments, and refunds to be created, and access settings can be configured, providing a comprehensive tool for merchant administration and activity coordination.

Movie Shots — FRONT-END DEVELOPER

JAN 2020 — SEP 2021

The website for NFT processing, where I was responsible for creating requests to the server and processing the data received from it. Furthermore, I worked on an admin panel for the website <https://www.movieshots.io/> and added NFT data using React Table. I also implemented the functionality to modify NFT data and displayed different function panels based on access levels. Additionally, I designed modal windows for deleting or modifying NFT data.

Tros — FRONT-END DEVELOPER

NOVEMBER 2020 — MARCH 2021

- Front-end developer. Developing site layouts, site logic connection.
- Holding demos
- Meetings

Tros - it's System that allows bookkeepers to track their customers' financial documentation and manage insights lists to keep valuable and recurring activities on track.

This fintech application aims to provide Israel-based entrepreneurs the ability to get processed and analyzed information obtained (parsed) from the documents provided by the Israel tax authority. After processing and analysis, users get all information about their company finances in a user-friendly way. This information such as debts, missing recurring payments, and possible problems in the future also allows users to self-manage processing and analysis of financial rules and flow to keep flexibility for most financial cases.
