- Managing development and deployment processes using tools Such as Data Loader, Change Sets, Workbench, Ant, Eclipse Force.com, IDE, Import and Export Articles and Atom.
- Build communities and set up the sites.
- End to end management of projects through all phases using agile Methodologies (Scrum) and Waterfall Model.
- Requirements gathering and analysis, Design, Estimations, Coding, Unit testing, Debugging, Deployment, Bug fixing, Documentation, Code Reviews, Leading team.

Technical Skills

Salesforce: Apex, Batch Apex, Governor Limits, Integration(SOAP/REST)
Lightning Experience Development: Salesforce Lightning Design System and Lightning Components, Aura Framework, JavaScript Controllers, Server-side Controllers.
Databases: SOQL
Web Technology: Visualforce, HTML, JavaScript
Issue Tracker : JIRA
Version Control Tools: Perforce
Tools: Ant, Eclipse, Firebase, Postman, Force.com IDE, Atom, aside.io

Project Details

Project	**Adobe Integration**
Role	Salesforce Developer
Description	I have developed a platform to integrate Salesforce and Adobe for the echo sign, to get a customer signature on proposal or contract. I worked here to covert a VF page into pdf and send it via integrated Adobe platform from Salesforce this project gets done by using vf page, apex, webhooks, and callouts.
Project	**Salesforce and Shopify**
Role	Salesforce Developer
Description	I have developed a connector using Salesforce and Shopify to integrate all the 360-degree view of any customer's purchases. It has been developed primarily using Apex triggers, Batch classes, apex classes, apex Http callouts, webhooks, etc.
Project	**Google Drive integration**
Role	Senior Salesforce Developer
Description	I have developed integration with Google Drive to create a run time folder and access information from there. It was a project management application where I need to integrate a Google drive to Salesforce to create a folder of the coming project as well as give a 360-degree view to the client to see Google drive documents and folders from Salesforce. Here I have used triggers, apex lightning, and webhook and callout.
Project	**Webinar Management**
Role	Independent Salesforce Developer
Description	I have developed a webinar management System. This project is about to create a platform and manage all organized webinars on this platform. I have created a record of registered attendees and generated a webinar automation email invitation and secured password to attend webinars. Here I have used triggers, apex, lightning, reports webhooks and callouts.

Salesforce Experience

- Create Lightning components and custom lightning lookup to achieve the requirements.
- Written Web Service to sync the data to SFDC by using the REST and SOAP API.
- Involved in the development & enhancement of modules.
- Upgraded some Apps from Salesforce Classic to Lightning Experience to develop the rich user interface and better interaction of pages.
- Worked on the Salesforce1 Platform to build Mobile App by enabling Lightning Components to make Lightning Application mobile.
- Enabled Aura Framework, by adding Aura Attributes and Aura Handlers for Events to focus on Logic and Interactions in Lightning Applications.
- Involvement in the testing phase. Created reports and dashboards to know the member information and their order purchase.
- Create a batch class to sync the data to SFDC.
- Create Custom Triggers and perform Asynchronous calls to implement the business logic as per the requirements.
- Prepared Proof of Concept and Solution Demonstration
- Analyze the requirement and provide a solution to the Client.
- Analyzing requirements and suggesting a better approach to the client.
- Configured modules using objects, fields, page layouts, record types.
- Worked on Translation by using the Custom Labels.
- Implemented various processes using workflows.
- Expertise in Knowledge articles creations, maintain actions.
- Created Web Services for migrating the data from 3rd party systems and middleware.
- Created Communities, maintained sites for external users who are not the part of SFDC and can access that without login to the SFDC portal.
- Build VF pages, controllers, apex classes and triggers.
- Worked on different functionality and report to the team working from different locations.
- Used JIRA for the requirement and defect tracking.
- Worked with the third-party Portal team in their integration services with Salesforce.
- Crested process builders to get output and send an email to that script owner
- Developed custom functionalities using Lighting components, Apex classes, Visual Force pages, Visual force Components, Triggers, Batch Apex as part of the change requests.
- Designed the flow of the module based on the requirement.
- Custom mapping of fields to Accounts, Contacts or Opportunities
- I have worked over 10 + Salesforce Integrations using REST/SOAP APIs.
