Siddeeqe Public School

2013

Rawalpindi, Pakistan

Courses

- Chem, Bio, Phy, Math

PERSONAL PROJECTS

Product Search Using Camera(FYP)

- It's is an android application. Front end on android and backend on python. We used deep learning algorithm for recognition of image(product). Picture of product e.g laptop, mobile phone, fashion products is taken, after successfully recognition of image, products will be fetched from the two E-commerce platforms Ebay and Aliexpress with their details. Products will be shown to user side by side. User can compare the products, and if user wants to purchase any product, he will have to click on that product, it will take user to website for further actions. Image is also saved with its recognized label from the server into database for future purposes.

Pizzeria

- A full stack web app. In admin panel, admin can add new pizza deals, can view requests of user for custom deals. In Customer panel user can view new pizza deals, make order for new pizza and add to cart option for future deals.

Seven's Pizza

- An online pizza ordering website by which you can order pizza. The website was built using PHP and Javascript.

Bus Reservation System

- A web app built in java, simple CRUD operations.
