

Virtev

Oliver Stanković
Web developer

SKILLS

- Fluent in following programming / querying languages
- PHP
- JavaScript
- ActionScript
- SQL
- Cypher
- Python
- Web frameworks/technologies -
- Symfony (worked in versions 1.1 till 4.3)
- ReactJS
- Elasticsearch indexing DB
- Neo4j graph DB
- Redis key/value DB
- Drupal
- WordPress
- Apache/Nginx setup
- implementations of various payment systems (PayPal, Stripe, FirstData, SagePay, 2Checkout)
- implementation of Amadeus flight ticketing system
- implementation of RomsXml and HotelsPro hotel reservation systems
- Other desktop applications
- Adobe design set (Photoshop, Illustrator, InDesign), CorelDraw, Corel Ventura

EDUCATION

Faculty of Electric Engineering

Oct 1992. – Mar 2000

Electrical engineer, Computer Sciences, BSc.

WORK EXPERIENCE

Virtev :

01/2019 - present

Mainly working as Web developer.

EtonDigital Ltd:

04/2008 - 01/2019

Position - Web developer, Project architect

I am taking care about new features and project architecture in which direction we are moving. I need to create documents about architecture and share ideas, so every developer will be on the same page. Working as web developer on many start up projects.

Freelance:

06/2004 - 01/2008

Position - Web developer (PHP and Flash ActionScript 2/3)

Salus Global.:

01/2013 - 01/2015

Position - Web developer – Teal Lead

International social network for connecting the civil engineering/architects of medical types of buildings (hospitals, health institutes...). My position involved creating the site structure, developing the user/organization profiles, payment options, conference mini-sites, and overviewing the code of other team members. This project was a team of 8 people (3 backend developers - including me, 2 frontend developers, 1 designer, tester, and scrum master). Project is based on Symfony framework, with additional services – Elasticsearch, Redis, Neo4j, RabbitMQ.

Supercoucou:

09/2012 – 03/2014

Position - Web developer – Teal Lead

Social network for travelers. Users can create their own group trips, and achieve discounts (sort of groupons for trips). Besides trip offers, user can book a hotel, and buy a flight ticket for any air flight globally. There were 8 people in this team (same as for salus.global – 3 BE, 2 FE, designer, tester and scrum master). My work included direct contact with the client, as well as organizing the technical development of the team. Also, I have created the complete Amadeus flight ticketing system from scratch (there is no API plugin supplied by Amadeus), as well as user profiles section, and hotel booking based on RoomsXML hotel provider, and HotelsPro. Both hotel providers are merged into one search mechanism on site (similar to Trivago hotel aggregator). Active time on development was 10 months, with many changes ongoing. Project is built on Symfony platform, supported by extensive usage of Elasticsearch and Redis servers.

ADDITIONAL INFORMATION

- Very friendly and mediation type of person, capable of solving issues in team work, supportive and willing to share the knowledge. Equally competent in solo and team projects. Very deep knowledge of computer technologies (have been programming in Basic on Commodore 64, and Assembly language for 68k processors on Amiga since late 1980s) and computer architectures. Very versatile in communication with the client, and figuring out their needs. Constant monitoring of new web technologies and evaluating their possible usage.

SOME OF MY PROJECTS

www.salus.global

Symfony , ElasticSearch, Redis, Neo4j, RabbitMQ.

www.supercoucou.com

Symfony, ElasticSearch and Redis serv
