### 3. GAINART PROJECTS WORK

#### **3.1 ONLINE JOB PORTAL**

Technology: PHP | Version – 7.4 |

Database: MYSQL |

How It Works:

Icchashakti online job portal is fully functional website to provide online jobs to mentally and physically disabled peoples. Portal having multiple profile sections where disabled people register their details and companies also have access to register and hire people according to their needs.

One more important business function is implemented where company or manufacturer directly offer their work to organizations who are taking care of such people who are unable to work due to their mental and physical disabilities.

#### **3.2 Account Billing Software**

Technology: Dot Net | Version – 4.5 |

Framework: MVC

Database: MYSQL |

How It Works:

Account software is developed to simplify the process of billing in commercial shops and businesses. Research was taken for how to simplify shop systems by implementing a greater number of features in same function. Software is completely desktop based. Complete stock management, Smart online web-based store, multiple billing options and reports and many more functions are implemented in it.

System is highly accurate, and all the functions added are working perfectly smooth with simplified user interface which provide very easy understanding to user.

#### **3.3 Stock Management Software**

Technology: Dot Net | Version – 4.5 |

Framework: MVC

Database: MYSQL |

How It Works:

Stock management software is developed to provide ease to manage stock with single clicks. It tracks the complete inventory and keeps vendor updated with their stock. It also creates sales and purchase order by comparing existing system. Report generation is also implemented to easily generate purchase list with quantity.

Number of updates is given to add more functions in existing system includes, Holed stock management, Stock Expiry. Best update was given to purchase system where system can automatically diagnose the stock selling frequency per month and generate particular order according to time requirement.

#### **3.4 Online Exam Portal**

Technology: PHP | Version – 7.4 |

Database: MYSQL

Framework: CI

How It Works:

Online Exam System was launched by considering the schools and institutes exam need in Covid-19 lockdown condition. All secure exam functions are implemented in it by considering the exact need of schools and institutes

Admin panel was provided for teachers and admin department where they register and set exam questions and exam schedule. Instant reports generation and results are made in admin panel where admin and teacher both download reports and students get there result instantly after submitting the exam quickly. Practice exams are also implemented in it.

#### **3.5 Gold Loan Management Software**

Technology: PHP | Version – 7.4 |

Database: MYSQL

Framework: Laravel

How It Works:

Gold loan management system is developed to provide ease to manual loan management process. Customer registration, New Loan Process, Loan Top-up Process, Loan close process is implemented in it which simplifies all the functions of gold loan process. Admin panel functions include report generation according to all the filters.

This system is integrated in existing system and database due to which same customer data will be used for multiple software's to avoid every time customer entry in it.

### **3.6 Hospital Management Software**

Technology: Dot Net | Version – 4.7 |

Framework: Entity

Database: MYSQL |

How It Works:

This software is slightly different from existing hospital management system. This is designed mainly for Ayurvedic hospitals. Doctor's module, Patient Module, Compounder module and Staff modules are developed in it.

Tablet formula is also implemented where doctor add tablet formula in prescription according to patient and this will go to the pharmacy store. Patient will also access the prescription reports and all the required data needed to store as a medical history. Doctors have access to everything in doctor panel.

### **3.7 E-Commerce Website**

Technology: PHP | Version – 7.8 |

Database: MYSQL

Framework: CI

How It Works:

This is single vendor E-commerce website in which all the e-commerce functions are developed. This website is similar to online E-commerce portals having admin panel and customer web panel.

This was designed and developed by considering some specific requirement of client. Due to single vendor channel all access is kept under admin and complete process will be manage and permitted by admin panel starting from receiving order to delivery.

One of the major advantages of this website is referral charges and delivery process is under control of admin due to which owner get more profit and ease of function.

### **3.8 Bixnex marketing application**

Technology: Flutter | Version – 1.22

Database: MYSQL

Language: Dart

How It Works:

This is complete dynamic application in which multiple functions developed. Social media is also integrated in this application.

Basic motive of application is to provide multiple services in low cost for ex. Design work, development work, and graphics work and so on.

Client's purpose is to provide all those services in low cost as compare to market rate. You can add your requirement in this application, and you will get reply from admin side. client was already have business clients tied up for every particular service.

### **3.9 Mello Application**

Technology: Flutter | Version – 1.22

Database: MYSQL

Language: Dart

How It Works:

This Application plays songs according to multiple categories and behavior of customer preset by considering time and environment. API developed in PHP and database in MySQL

Standard user registration with mobile number OTP verification. From admin panel admin can add songs according to categories. User side is same as that of music player with added functions like song, add to favorite functions.
