Honest, Hardworking, Trustworthy, Management Skill, Hardworking, Teamwork Ability

Professional Projects

Lockmesh Security System

At LockMesh, we deploy and maintain, cutting-edge and affordable security solutions through our highly secure android devices.

Link: <https://lockmesh.com/>

Secure Mail

As security is our foremost concern, we have developed an application, that allows you to safely share emails on a modern and easy-to-use interface. The interface is highly secure and makes your overall emailing experience very simple and unique.

LockMesh has created an innovative emailing system, which will help you make your emails professional and private.

Secure Launcher (Custom Andriod Launcher)

With LockMesh's exclusive security solutions, we have developed a Secure Launcher with the Screen Locker exclusively for LockMesh's android device. We aim to keep the interface elegant as well as safe. Hence, the Secure Launcher is user-friendly, offers a safe environment, and ensures privacy for users. Moreover, our robust Screen Locker allows access after complete security checks.

OTA Updater Client

OTA client used for A/B (Seamless) system updates.

Modern Android devices have two copies of each partition (A and B) and can apply an update to the currently unused partition while the system is running but idle. A/B devices do not need space to download the update package because they can apply the update as they read it from the network; this is known as streaming A/B.

Secure Pay

At LockMesh, we believe in staying ahead of the pack, which is why we have come up with a Secure Pay option, that enables you to make payments on one of the most secure systems.

Our team has diligently worked and created this system, which will enable you to make payments on LockMesh devices with ease and security. You can make swift transactions through this system, moreover, it can be linked to the web panel for better records and account management

Secure Vault

Enabling easy storage of all incoming files and data, SVault secures your data against any kind of potential threats. Encrypting the data within the device itself, a separate backup is also provided to keep you from losing any of your data. Lowering the overall risk of data exposure/leakage/elimination, SVault encrypts your stored data files, eliminating the potential of data damage, harm, or loss.

Secure Market

A safe, and fully satisfying experience on a smartphone, requires applications, that enhance the utility of the device. Downloading various anonymous applications from likely sources is certainly going to disrupt the security of your system. Well, to solve this issue, our team at LockMesh has created a smart solution, which is "Secure Market".

This allows you to find multiple applications and download them safely on your LockMesh's device. We have created this application to enhance your utility and further make the entire downloading and installing process safe and secure.

The interface is highly secure with easy navigation.

Secure Chat

The SChat or Secure Chat platform offered by LockMesh is a highly safe messaging application that uses Signal Protocol. Our SChat application is exclusive for LockMesh devices and is extremely secure. With signal encryption, this messaging feature allows you to share voicemails, voice messages, and text messages with complete security.

You can share any of the discrete or confidential information through this feature, as it keeps it anonymous and private. Our standard tech solutions keep your messages and conversations completely safe and protected.
