## SUMMARY

---

I enjoy turning ideas into clean, responsive websites that people can actually use and enjoy. With a strong base in HTML, CSS, and JavaScript, I've worked on projects like UI clones and multi-page systems that helped me understand how real websites are structured and built. As a Computer Science student, I've developed strong logical thinking and problem-solving skills, which I apply whenever I'm building or improving a project. I'm always looking to learn, improve my code, and create better user experiences.

## WORK EXPERIENCE

---

**Frontend Developer Trainee, Frontend Development Practice** **Jan 2025 - Present**  
Actively building responsive web pages and small interactive projects by recreating well-known websites. Gaining hands-on experience in structuring layouts, improving UI design, and writing clean HTML, CSS, and JavaScript code. Focused on understanding how real-world websites are designed and optimized for different screen sizes.

**C++ Developer Trainee, C++ Development Practice** **Sep 2025 - Present**  
Strengthening core programming fundamentals including loops, conditional statements, and functions. Developing small console-based applications to practice logical thinking, problem-solving, and structured coding.

**Volunteer, Alkhidmat Foundation** **Mar 2022 - Present**  
Volunteered during the 2022 flood emergency, supporting relief efforts for affected communities. Assisted in distributing food, clean water, and essential supplies to families in need. Worked closely with team members to manage resources efficiently and ensure timely support. This experience strengthened my sense of responsibility, teamwork, and commitment to community service.

## EDUCATION

---

**Bachelor of Computer Science** **Sep 2025 - June 2029**  
Beaconhouse National University Lahore

## ADDITIONAL INFORMATION

---
