OTHER TOOLS

VS Code

Postman

Canva

Figma

ADDRESS

- Home Town : Nagpur ,Maharashtra.

INTERPERSONAL SKILL

- Strong problem-solving
- Skills Eagerness to learn
- Teamwork Time
- Management
- Attention to Detail

LIVE PROJECT

React Native Live Project (Professional Experience):-

- **Anti-theft-App** :-

Role :- Front-end Developer

- Emergency alerts via SMS and phone calls
- Anti-accelerometer sensors for motion detection
- Seamless navigation using React Navigation
- Custom UI styling with CSS-based components
- Efficient state management using Redux
- Permission handling using react-native-permissions

- **Poster-App**

Role :- Front-end Developer

Developed a React Native mobile app that allows users to create and customize posters with quotes, images, and design templates. Focused on building an intuitive and responsive user interface, implementing smooth navigation, and optimizing performance for a seamless user experience. Integrated dynamic content rendering, reusable components, and state management using Redux to ensure consistency and scalability across the app.

EXPERIENCE

Full Stack Developer & React Native

QaswaTechnologies | April2021–Present | Nagpur

- I Have 4 Year Of Experience Developed and
- maintained mobile applications using React Native, focusing on building intuitive and responsive user interfaces. Implemented reusable components and
- optimized performance for cross-platform compatibility. Collaborated with the team to
- design and integrate APIs into mobile applications, ensuring seamless data flow. Gained hands-on experience with React.js for developing dynamic
- web application components.

LIVE PROJECT

React.js Practice Project (Self-Initiated):

- **MunimX – Live Project (React Native Developer)**

Role :- Front-end Developer

Developed a complete buyer-supplier management and business accounting application using React Native, designed to simplify party tracking, stock, transactions, crate management, and invoice handling. The app enables users to log in, search contacts, add parties, manage buyers & suppliers, and maintain full business records in a seamless and intuitive interface.

- Implemented a contact-based party creation system where users can search phone contacts and instantly add them as Buyers or Suppliers.
- Designed dedicated Buyer and Supplier sections that display party details, outstanding balances, and complete transaction history.
- Developed a Transaction Module allowing users to add sale/purchase entries with product quantity, rate, total amount, and auto-calculated profit & loss.
- Integrated Stock Management for product-wise stock, caret (crate) tracking, and real-time stock in/out updates synced with API.
- Built Crate Management to record how many crates were sent or received and maintain a clear balance with full history logs.
- Created Payment & History Module where users can add payments, check dues, and view complete financial summaries.
- Added Invoice Generation, allowing users to create, view, and share invoices with product details, totals, party information, and transaction IDs.
- Implemented Gate Pass Generation for dispatch/receipt of goods with vehicle details and item summary.
- Developed smooth app-wide state management using Redux, ensuring high performance and consistent data handling across all screens.
- Built reusable UI components and implemented clean navigation using React Navigation to provide a fast and user-friendly experience.
