About Me

Senior UI Engineer with 5 years experience in HTML5, CSS3, SCSS, and responsive web design. Proficient in building complex web applications, websites, and user interfaces. Skilled in designing user-friendly interfaces for intuitive user experiences.

Work Experience

Medcare MSO | Senior UI Developer

2023 – Present

- Created a product from scratch using web technologies such as HTML5, CSS3, SCSS, Bootstrap5, and Angular (UI Components).
- Implemented and fulfilled detailed technical requirements for the front end, including development configurations and version control protocols.
- Worked closely with the UX designer to translate their concepts into code.
- Familiarity with the latest standards for constructing user interfaces that are accessible and easy to maintain.
- Skilled in developing responsive layouts for optimal performance across different screen sizes.

NextBridge Pvt. Ltd | Senior UI Engineer

2021 –2023

- Mainly focusing on developing web front-ends across various projects using HTML5, CSS, SCSS, JavaScript, JQuery, Angular (UI Component), React (UI Component), and Ionic (UI Components).
- Executing and delivering detailed technical specifications for front-end tasks, incorporating development environments and version control processes.
- Collaborating with UX designers to translate their concepts into code.
- Cooperating with back-end software engineers to process and showcase intricate data, engaging in internal API design to accommodate a growing array of data types for front-end presentation.
- Engaging with QA Analysts and Product Owners to review and clarify project requirements.
- Collaborating with developers to integrate UI components for webpage structuring.
- Crafting precise and responsive web pages.
- Conducting assessments for website functionality and performance.
- Ensuring compatibility across different web browsers.
- Managing multiple projects concurrently.
- Enhancing specifications based on technical requirements from clients or the team.
- Utilizing React JS, NodeJS, and MongoDB for product development.

NodeJS

Projects

Maximus

During my time on a healthcare project, I led theme development using HTML5, CSS3, and Bootstrap5 in Angular UI Components. I created a visually appealing interface for healthcare needs, focusing on user experience. Integration of Bootstrap5 and Angular ensured performance and compatibility. Collaboration and user-centric design led to a successful healthcare product interface.

Estimation App

In an estimation app, as a Frontend developer, responsibilities included designing and implementing features using MongoDB, Express.js, React.js, and Node.js. Tasks involved frontend development, backend services, data management, performance, security, and creating features for estimating time and cost to enhance user experience.

Lily Cargo

In this project, the focus was on creating a visually appealing and user-friendly interface for an ERP freight system. Utilizing Sass for styling and Material UI for design elements ensured a seamless look. React JS was used to build dynamic components for an enhanced user experience. The UI included intuitive navigation, responsive layouts, and theme development to meet project needs and exceed client expectations.

Closet App

A mobile app for clothing planning where the UI developer focused on theme development and layout design using Ionic framework, SASS, and Angular components.

My Buddy Place

Creating a pet web portal with personalized solutions can enhance the bond between pets and owners, aiding community expansion. As a UI developer, I have experience working on portals using HTML, CSS3, Bootstrap 4, Sass, and JQuery/JavaScript.

Watsbot

Creating a Laravel-powered chatbot website with frontend languages has been a game-changer. By incorporating Bootstrap and HTML for layout design, the user experience has been taken to new heights. The chatbot service for businesses now boasts a visually engaging interface, thanks to the use of CSS, which introduces dynamic animations and transitions. This detailed strategy not only enhances the visual aesthetics but also ensures a seamless and immersive browsing experience for visitors.

BESTER CAPITAL MEDIA | Front End Developer

Feb 2021– Jun 2021

- Developing and integrating new features and functionalities.
- Defining and steering the website's structure while enhancing speed and scalability.
- Contributing to creating an efficient, responsive design and translating it into a functional theme.
- Proficiency in grasping CSS modifications and their impacts to maintain uniform style across various platforms and browsers.
- Transforming detailed layouts and wireframes into operational HTML pages and incorporating features using vanilla JS and jQuery.
- Experience in designing front-end layouts within PHP Laravel frameworks.

Himont Pharmaceutical | Front End Developer

2014 –2019

- Apart from concentrating on the front-end user interfaces of the Admin Portal, I explored various aspects of web development. This included utilizing HTML, CSS, JavaScript, and PHP to craft a smooth user experience. I was responsible for keeping web content updated and relevant.
- Testing and launching front-end web applications played a vital role in my position. Through meticulous testing and efficient updates, my goal was to boost website performance and functionality. I prioritized designing websites that perfectly reflected the branding identity, creating a cohesive and visually appealing online image.
- A standout aspect of my work involved transforming complex UI/UX wireframes into visual elements. By creating top-notch mockups and prototypes, I brought design ideas to life and refined them based on user input and industry standards.
- Understanding the intricacies of various delivery platforms, like mobile and desktop, was crucial for tailoring outputs to meet each platform's specific needs. This customization ensured a seamless user experience across all devices, maximizing reach and engagement.
- I also concentrated on optimizing the application for speed and scalability. By incorporating efficient coding techniques and performance improvements, my aim was to enhance the overall user experience and maintain smooth operation even during high traffic periods.
