Fabio Everton | AI Governance & Cloud Architecture (Hands-on)

AI Governance & Enterprise Architecture focused on learning and building practical systems across AI, cloud, and enterprise platforms.

What I do

- Hands-on exploration of AI systems and workflows
- Enterprise integration across Salesforce, ServiceNow, and Cloud platforms
- Applied learning in AI governance (risk, compliance, auditability)
- Building experimental architectures and technical labs

Core Stack

Salesforce

- Agentforce (learning & experimentation)
- Data Cloud (concepts + practice)
- Einstein Trust Layer (governance principles)

ServiceNow

- Now Assist (exploration)

- Virtual Agents (workflow experimentation)
- GRC concepts (learning phase)

Cloud

- Google Cloud Vertex AI (labs)
- BigQuery (basic data handling)
- API integration experiments

Governance Focus

- NIST AI RMF
- ISO/IEC 42001
- LGPD / GDPR
- AI risk and control concepts
- Auditability and traceability principles

What I'm building

- AI agent experiments with governance awareness
- Multi-platform integration labs
- Logging and traceability prototypes
- Architecture learning documentation

Status

This profile reflects a continuous learning and building process, evolving from foundational concepts into applied enterprise architecture practice.

"In AI we trust, but in Governance we audit."
