

ASHKAN IZADI

Laravel / PHP Backend Developer | Business Portals | Admin Panels | AI-Assisted Development

Email: persicoder@outlook.com | Open to Remote Freelance / Contract Work | English Communication

PROFESSIONAL SUMMARY

Product-oriented PHP/Laravel developer with strong experience building internal business portals, admin panels, database-driven applications, corporate websites, dashboards, and operational workflow systems. Experienced in Laravel, PHP, Livewire, MySQL, SQL Server, REST APIs, role/permission systems, file handling, Excel import/export, and maintaining existing production codebases. I also use AI-assisted development tools such as ChatGPT Codex, Cursor, GitHub Copilot-style workflows, and AI coding agents to speed up analysis, debugging, refactoring, documentation, and code generation while keeping technical decisions under human review.

CORE TECHNICAL SKILLS

Backend & Frameworks	Databases & Integrations	Tools & Workflow
<ul style="list-style-type: none">• PHP• Laravel• Livewire• REST API Development• Authentication & Authorization• Admin Panels / CRUD• Backend Maintenance	<ul style="list-style-type: none">• MySQL / MariaDB• SQL Server• Database Design• Query Debugging• Excel Import/Export• File Upload / Document Management• API Integration	<ul style="list-style-type: none">• Git / GitHub / GitLab• Composer• Docker basics• Postman / Swagger basics• Jira / Agile Scrum• Cursor / Codex / AI Agents• VS Code / PhpStorm

PROFESSIONAL EXPERIENCE

Product Owner / Product Manager & PHP/Laravel Developer | Tejarat Electronic Parsian Kish (Topkish / KPEC) | 2024 - Present

- Built and improved internal portal modules for document management, contract management, network information, operational records, and internal workflows.
- Developed Laravel-based admin features, user management, role/permission logic, file handling, search, filtering, pagination, and reporting-oriented screens.
- Worked closely with stakeholders to convert business needs into backlog items, technical tasks, acceptance criteria, and deliverable modules.
- Contributed to official company website projects in Persian and English, focusing on maintainability, content structure, and business presentation.

Product Owner / Software Developer | PeyBar / Barad Logistics Platform | 2023 - 2024

- Worked on logistics and transportation workflows involving operational status tracking, user flows, filtering, Excel-driven processes, and business rules.
- Collaborated with technical teams on backend workflow design, API-oriented features, dashboard improvements, and product requirement clarification.
- Supported roadmap planning, sprint backlog management, stakeholder communication, and issue prioritization.

Developer / Product-Oriented Software Professional | BarPin and earlier web projects | 2021 - 2023

- Worked on PHP-based business systems, database workflows, admin panels, and internal tools for real operational use cases.
- Used Docker, Git, RabbitMQ exposure, ClickUp/Jira-style task management, and structured development workflows.

PHP Developer / Technical Lead Experience | Earlier portal, insurance, and enterprise projects | 2016 - 2021

- Built and maintained web portals, insurance-related web applications, corporate websites, and administrative systems.
- Implemented data-driven screens, forms, calculations, backend modules, and integration-oriented features using PHP/MySQL technologies.
- Participated in technical coordination, requirement analysis, delivery planning, and troubleshooting of existing systems.

SELECTED TECHNICAL PROJECTS

Internal Business Portal: Laravel-based portal including document management, contract management, network information, operational records, users, permissions, and dashboard-style features.

Repair Request and Serial Tracking Module: Request tracking workflow with serial-number management, status handling, search, pagination, and synchronized data structures.

Device Inventory / Data Synchronization: Worked with MS SQL to MySQL style data flows, batch processing concepts, device records, filtering, and operational reporting screens.

Corporate Websites: Developed and maintained official corporate websites, including Persian and English versions with structured content and business presentation.

AI-ASSISTED DEVELOPMENT

- Use ChatGPT Codex, Cursor, and AI coding agents for code analysis, debugging, refactoring suggestions, documentation, test planning, and faster implementation research.
- Apply AI tools as productivity assistants while reviewing generated code manually for correctness, security, maintainability, and business fit.
- Comfortable working with AI-enhanced IDE workflows, prompt-based code exploration, and agent-assisted project understanding.

EDUCATION & LANGUAGES

- B.Sc. Software Engineering - Islamic Azad University, Saveh Branch.
- M.Sc. IT / E-Commerce coursework - Islamic Azad University, Kashan Branch.
- Languages: Persian native, English professional working communication.

Target roles: Laravel Developer, PHP Backend Developer, Admin Panel Developer, Web Application Developer, Remote Freelance Developer
