ARJUN NAGAR, REWARI (HR)

An aspiring architect dedicated to the delicate balance between timeless vernacular principles and the frontier of Artificial Intelligence. I believe great design begins with the technical precision of 2D 'bones' and is elevated through AI-driven optimization and evocative 3D visualization. Seeking an internship where I can contribute a fresh, tech-forward perspective to projects that respect both site and soul.

- Canva
- Vray
- D5
- MS office
- Generative ai

ACADEMIC PROJECTS

Anganwadi redesign | Kablana, Jhajjar, Haryana

Developed a comprehensive redesign for a rural childcare center, focusing on creating a safe, hygienic, and stimulating environment for early childhood education. The project prioritized spatial efficiency by organizing classrooms, nutrition centers, and play areas into a seamless, multifunctional layout that serves both children and the local community.

Group Housing Design | Sector 26, Dwarka, Delhi

This project involved designing a modern residential complex that balances high-density urban living with a focus on comfort and community. The goal was to create "breathable" living spaces that respond effectively to the climate of Delhi.

Jaisalmer Heritage Resort | Academic Project

Designed a luxury resort in Jaisalmer, Rajasthan, centered on the iconic "Sonar Quila" (Golden Fort). The primary challenge was site orientation; I developed a tiered layout to ensure that every guest room and public space has an unobstructed, frame-perfect view of the fort. This project balances modern comfort with the rich heritage of the Golden City.
